

DEVELOPING OUR ENERGY RESOURCES WILL GROW

OUR HUMAN RESOURCES

Introducing a labor-industry initiative to support policies that develop America's oil and natural gas resources – and preserve and create new, high-quality jobs

Oil and natural gas fuel economic growth and jobs. That's why 15 leading labor organizations have joined with the U.S. oil and natural gas industry to create the Oil and Natural Gas Industry Labor-Management Committee. We've formed this unique partnership to support public policies that promote energy security and job security.

More than 1.8 million Americans already work in the oil and natural

gas industry – the world's most innovative and technologically advanced. America is rich in untapped energy, and developing federal oil and natural gas resources to the maximum extent possible could create more than 160,000 new jobs, many of them in refinery and pipeline construction.

Let's all join together to put more Americans to work increasing our energy security – and job security.
